OUR SERVICES

Abrasive Blasting

Our blast teams are equipped with the right equipment for professional-grade surface cleaning and preparation. We can use any grit media our customers request, including aluminum oxide, glass bead, black beauty, steel shot, etc.

CO2 (Dry Ice) Blasting

With our dry ice blasting process, we use recycled solid carbon dioxide (CO2) pellets or MicroParticles, which are blasted at supersonic speeds and sublime on impact, lifting dirt and contaminants off the underlying substrate.

Non-Destructive Testing (NDE/NDT)

Our NDE/NDT partners perform a variety of practical inspections on site and have the capability to measure and detect any defects in turbine blading and critical components.

A SIGNATURE OF EXCELLENCE

Our Mission

We have been trusted by our customers to provide quality service in a timely manner. And we are dedicated to deliver the quality service our customers deserve in the most cost effective way possible.

Our team will never complete any project without 100% customer satisfaction. That is our promise to you.
